# KNOWLEDGE TO **ACTION**

## KNOWLEDGE

Over 2 million Americans have substance use disorders from prescription opioids, & nearly 500,000 from heroin

Opioid use increases the likelihood of developing life-altering problems such as transmission of HIV & hepatitis, incarceration, post-traumatic stress disorder, & parenting deficits, as well as homelessness & premature death

Among families involved with child welfare, between 50% & 80% of abused or neglected children have substantial safety risks due to parental substance use disorders

Parents with substance use disorders do not regularly reunify with their children after they are placed in foster care, with one study showing a reunification rate as low as 10%

The World Health Organization (2004) has identified MAT as the most effective treatment for opioid use disorders, & the effectiveness of MAT increases when people receive treatment for longer time periods

A recent national study found that around 1.3million individuals with opioid use disorders could benefit from MAT but are not receiving it

Barriers to the implementation of MAT include: lack of availability, stigma, absence of a prescribing physician, & exclusive commitment to the 12-step model of treatment

Additionally, courts often hold unfavorable opinions of MAT; a nationwide survey of U.S. drug courts found that nearly half had policies that prohibit its use.

## **ACTION**

Though reasonable efforts are somewhat undefined, the laws are clear that whenever possible, children should be raised by their parents. The law is also clear on the timeline for doing so; the Adoption & Safe Families Act (ASFA; Public Law 105-89) of 1997 requires a termination of parental rights for children living in foster care for 15 of the most recent 22 consecutive months. These mandates require timely & effective interventions that address opioid use & help parents retain custody of their children.

In this study, duration of MAT was positively associated with parents retaining custody of their children at case closure, even when accounting for greater number of household opioid users. In fact, compared to parents who received no MAT, a year of MAT increased the odds of parents retaining custody of their children by 120%.

From this, we should begin an effort to further educate everyone in the system of care about MAT. CMOs should learn as much as they can about it. HFC will also begin seeking out opportunities to provide learning environments about MAT & its benefits.

**When DSM-5 was published in May 2013 it included some three hundred disorders in its 945 pages. It offers a veritable smorgasbord of possible labels for the problems associated with severe early-life trauma.....Before the late nineteenth century doctors classified illnesses according to their surface manifestations, like fevers and pustules, which was not unreasonable, because they had little else to go on.....With DSM-5 psychiatry firmly regressed to the early nineteenth century medical practice. Despite the fact that we know the origin of many of the problems it identifies, its “diagnoses” describe surface phenomena that completely ignore the underlying causes.**
